

Aline task and visitor chairs.

230 range

Aline visitor and office chair
Design: Andreas Störiko

Model 231/2
grey fabric, bright chrome-plated aluminium frame

This range is an ingenious combination of lightweight furniture that is comfortable at the same time. So what could be more logical than to add a visitor and standard office task chair to the concept?

The visitor task chair has a flat, four-arm star base and the transportable, height-adjustable office chair has a vertically aligned, five-star, die-cast aluminium base. Similarly to the swivel pedestals, they are bright chromium plated and therefore particularly robust.

Both models have a contact suppression feature and are very flexible. As a result, they are very comfortable for a range of applications, for meetings, discussions, showrooms, reading rooms, Internet cafés or at your desk at home.

The through-dyed, covered seat and backrest frame are available in black, grey or white, optionally with or without armrests. For the black type, the cover is also available in silver-black, or copper-black.

For even more comfort and choices of material and colour: the seats on the task chairs can have textile cushions with high-quality stitched fluting on request.
